user project

ng new user-shopping-app

routing → yes

styling → css

JavaScript provided two pre defined objects

ie **sessionStorage and localStorage**

Which help to share the data between one page to another page.

sessionStorage.setItem("key",value);                      to set value in session storage

sessionStorage.getItem("key");

sessionStorage.removeItem("key");

ng g c login

ng g class login

ng g s login

ng g c dashboard

ng g c product

ng g class product

ng g s product

ng g c cart

ng g class cart

ng g s cart

BehaviorSubject : it is pre defined API

Part of rxjs which help to create custom Observable.
