

MVC : Model View Controller

View layer → html and JSP , CSS      presentation logic

Controller layer → Servlet

Model -layer →

JavaBean --- (setter/getter methods) → Map to Table in database

Service → Pure business logic

Dao → pure database logic using jdbc.

Resource → database connectivity

Html form or jsp form doesn't support delete as well as put method they support only get or post.

Using angular with help of HttpClient we can call get, post, put and delete etc.
