Folder Created as Course2

Backend folder (JAX_RS using Java)

Frontend folder (Angular)

we need two type of user

1 Admin

        SignIn   (No Signup for Admin user)

        Admin login successfully it will open admin dashboard

        Add Product, Delete Product, View Product and Update Product

2 Customer SignUp as well as SignIn

        Customer login successfully it will open customer dashboard

        Only view the Product and Place Order for specific product.

In Frontend folder

        Create angular project.

        Add bootstrap features

        import FormsModule, ReativeFormsModule, HttpClientModule in app.module.ts file

ng g c login/login	component
ng g class login/login	model class
ng g s login/login	service class

frontend ie

angular

<mark>frontend</mark>   <mark>share the data   backend   database</mark>

model class   ==   json data   ==   java bean class == table login

format

In backend folder

    Create eclipse project ie create dynamic web project and convert to maven and add the required dependencies.
