JSTL : JSP or Java Standard Tag Library

Which provided set of tag which help to do core or programming functionality using tag base, sql (replacement of jdbc), number format functionality as well as xml functionality.

Using jstl we can do all functionality using tag base.

EL : Expression Language

${expression}

If we want to use JSTL features in jsp page we need to take the help of taglib directive tags.

Java 8 Features

Java 11 Features

Limitation of servlet and jsp

Rest full web service

We can create our own rest api and those rest api we can consume in angular application.

After rest full web service

We will learn

Frontend angular

Backend java
